LEAP

LEAP

Form and substance. Shape and material. LEAP is a blend of comfort and sturdiness, designed to furnish both public and private areas and create opportunities for socialising, both indoors and outdoors. A contemporary chair with a metropolitan style that enhances its elegance, simplicity and versatility.

LEAP is particularly suitable for outdoor use in any climatic condition.

Its ergonomic shape makes it ideal for cafe and restaurant areas. LEAP can be easily stacked and is lightweight, making it easy to transport anywhere.

In addition to facilitating transport, the opening between seat and backrest allows any water to drain off in outdoor applications.

LEAP is made of U.V. treated polypropylene and fibreglass, with anodized aluminium for the metal parts, and can therefore also be used in adverse environments (rain, humidity, salinity).
